

# The Bias Report

Audit Date:	07 Dec 2022
Data Audited:	1000 rows
Attributes Audited:	Sex, Age, Foreign
Audit Goal(s):	Equal Parity - Ensure all protected groups are have equal representation in the selected set. Proportional Parity - Ensure all protected groups are selected proportional to their percentage of the population. False Positive Rate Parity - Ensure all protected groups have the same false positive rates as the reference group). False Discovery Rate Parity - Ensure all protected groups have equally proportional false positives within the selected set (compared to the reference group). False Negative Rate Parity - Ensure all protected groups have the same false negative rates (as the reference group). False Omission Rate Parity - Ensure all protected groups have equally proportional false negatives within the non-selected set (compared to the reference group).
Reference Groups:	Custom group - The reference groups you selected for each attribute will be used to calculate relative disparities in this audit.
Fairness Threshold:	90%. If disparity for a group is within 90% and 111% of the value of the reference group on a group metric (e.g. False Positive Rate), this audit will pass.

## Audit Results:

1. Summary
2. Details by Fairness Measures
3. Details by Protected Attributes
4. Bias Metrics Values
5. Base Metrics Calculated for Each Group

## Audit Results: Summary

Equal Parity - Ensure all protected groups are have equal representation in the selected set.	Failed	Details
Proportional Parity - Ensure all protected groups are selected proportional to their percentage of the population.	Failed	Details
False Positive Rate Parity - Ensure all protected groups have the same false positive rates as the reference group).	Failed	Details
False Discovery Rate Parity - Ensure all protected groups have equally proportional false positives within the selected set (compared to the reference group).	Failed	Details
False Negative Rate Parity - Ensure all protected groups have the same false negative rates (as the reference group).	Failed	Details
False Omission Rate Parity - Ensure all protected groups have equally proportional false negatives within the non-selected set (compared to the reference group).	Failed	Details

## Audit Results: Details by Fairness Measures

Equal Parity: **Failed**

What is it?

This criteria considers an attribute to have equal parity is every group is equally represented in the selected set. For example, if race (with possible values of white, black, other) has equal parity, it implies that all three races are equally represented (33% each)in the selected/intervention set.

When does it matter?

If your desired outcome is to intervene equally on people from all races, then you care about this criteria.

Which groups failed the audit:

**For Sex** (with reference group as **male married/widowed**)  
male single with **5.81X** Disparity  
female divorced/separated/married with **2.87X** Disparity  
male divorced/separated with **0.41X** Disparity

**For Age** (with reference group as **Older**)  
Younger with **0.77X** Disparity

**For Foreign** (with reference group as **no**)  
yes with **23.42X** Disparity

Go to Top

Proportional Parity: **Failed**

What is it?

This criteria considers an attribute to have proportional parity if every group is represented proportionally to their share of the population. For example, if race with possible values of white, black, other being 50%, 30%, 20% of the population respectively) has proportional parity, it implies that all three races are represented in the same proportions (50%, 30%, 20%) in the selected set.

When does it matter?

If your desired outcome is to intervene proportionally on people from all races, then you care about this criteria.

Which groups failed the audit:

**For Sex** (with reference group as **male married/widowed**)  
female divorced/separated/married with **0.85X** Disparity  
male divorced/separated with **0.76X** Disparity

**For Age** (with reference group as **Older**)  
Younger with **0.83X** Disparity

**For Foreign** (with reference group as **no**)  
yes with **0.90X** Disparity

Go to Top

False Positive Rate Parity: **Failed**

What is it?

This criteria considers an attribute to have False Positive parity if every group has the same False Positive Error Rate. For example, if race has false positive parity, it implies that all three races have the same False Positive Error Rate.

When does it matter?

If your desired outcome is to make false positive errors equally on people from all races, then you care about this criteria. This is important in cases where your intervention is punitive and has a risk of adverse outcomes for individuals. Using this criteria allows you to make sure that you are not making false positive mistakes about any single group disproportionately.

Which groups failed the audit:

**For Sex** (with reference group as **male married/widowed**)  
male divorced/separated with **0.74X** Disparity  
male single with **0.79X** Disparity  
female divorced/separated/married with **0.63X** Disparity

**For Age** (with reference group as **Older**)  
Middle2 with **1.29X** Disparity  
Middle1 with **1.15X** Disparity

**For Foreign** (with reference group as **no**)  
yes with **2.04X** Disparity

Go to Top

False Discovery Rate Parity: **Failed**

What is it?	When does it matter?	Which groups failed the audit:
<p>This criteria considers an attribute to have False Discovery Rate parity if every group has the same False Discovery Error Rate. For example, if race has false discovery parity, it implies that all three races have the same False Discovery Error Rate.</p>	<p>If your desired outcome is to make false positive errors equally on people from all races, then you care about this criteria. This is important in cases where your intervention is punitive and can hurt individuals and where you are selecting a very small group for interventions.</p>	<p><b>For Sex</b> (with reference group as <b>male married/widowed</b>)</p> <ul style="list-style-type: none"><li>male single with <b>0.79X</b> Disparity</li><li>male divorced/separated with <b>1.42X</b> Disparity</li></ul> <p><b>For Age</b> (with reference group as <b>Older</b>)</p> <ul style="list-style-type: none"><li>Younger with <b>1.66X</b> Disparity</li><li>Middle1 with <b>1.37X</b> Disparity</li><li>Middle2 with <b>1.13X</b> Disparity</li></ul> <p><b>For Foreign</b> (with reference group as <b>no</b>)</p> <ul style="list-style-type: none"><li>yes with <b>6.45X</b> Disparity</li></ul>
